KELP-EU Mission

To kickstart the European sustainable seaweed industry and sustainable farming by developing seaweed-based products for people health and planet health

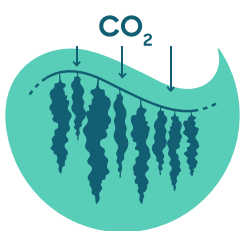

How

Scale up seaweed processing and identify and design a demonstrator biorefinery site

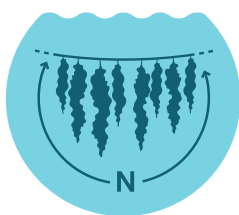

Develop a supply chain of sustainably farmed seaweed, working with farmers across Europe

Develop high-quality seaweed products that meet growing demand for products with traceability, provenance and sustainability at their core

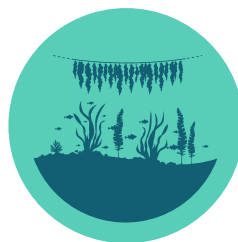

Why Seaweed?

Absorbs CO₂

Absorbs nitrogen

Protects seabed

No deforestation

No fertiliser

Food security

No freshwater

Creates jobs

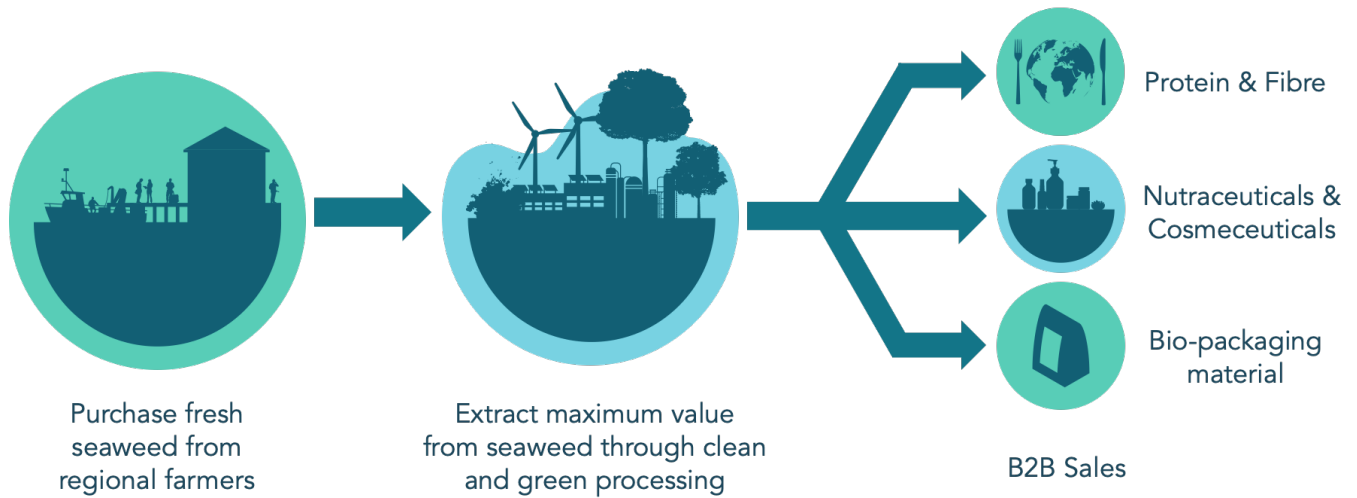

KELP-EU will achieve its objectives with the contribution of the European Maritime and Fisheries Fund of the European Union

GA101038311 - EMFF-BEW-2020

Co-funded by the European Union

Scaling Up an Innovative, Clean and Green Technology

WP1 – Project management

WP2 – Development of sustainably farmed seaweed supply chain

WP3 – Scale up of seaweed processing and demonstrator biorefinery site identification and design

WP4 – Development of seaweed products

WP5 – Exploitation and dissemination

Work Packages

Why is this project so important?

By supporting the development of a sustainable seaweed industry in Europe, this project highlights how there are viable systemic solutions for the restoration of our oceans, the wellbeing of global citizens through improved diets and livelihoods and the mitigation of climate change at a moment when urgent change is needed.

KELP-EU will achieve its objectives with the contribution of the European Maritime and Fisheries Fund of the European Union
